

RECYCLING IS IN TROUBLE

- and WE NEED YOUR HELP -

Contamination Ruins Recycling

In the past 5 years, the quality of Recycling has been reduced tremendously due to contamination.

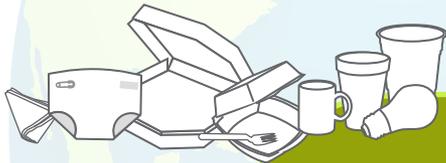

- We may think we all recycle, but we might be doing it wrong. - Recycling carts, bins, and dumpsters get filled with non-recyclable items every day. This happens not only with our customers, but it's happening nationwide. When recycling gets contaminated, it can't be used to make new products.

Education is Important

- All recyclable items should be rinsed and free of any food residue before placing in your bin.
- Styrofoam, Diapers, Syringes, Lights Bulbs belong in your trash and are not recyclable.
- Plastic Bags can be recycled at your local grocery store (#PlasticBagProblems).
- Never put batteries in your trash can or recycling bin.

We belong in your Trash!

ONLY IF
WE WORK TOGETHER
WE CAN ACHIEVE A
CLEANER
ENVIRONMENT

LET'S SAVE
MOTHER EARTH
TOGETHER

We belong in your Recycling!

Recycling is a Commodity

For the past ten years, China has imported nearly half of America's plastic, cardboard, and mixed paper recyclables. **NOT ANY MORE!** Due to the excessive contamination issues, China is putting its foot down and has banned "dirty recycling" from entering their country. This ban is called - **Operation National Sword** - It has resulted in millions of tons of recycling material being processed with nowhere to go.

Think Before You Throw

Now where will our recyclables go? - Good Question! Everyone is eager to recycle, cities are striving to become "ZERO WASTE", but what's going to happen to all of our recyclables every day? **Unless Americans get better about what they put in the recycle bin, things will only get worse, and eventually a lot of what you recycle could end up in a landfill. #ThinkBeforeYouThrow**

"OUR CHILDREN AND GRANDCHILDREN DESERVE A WORLD WITHOUT POLLUTION."
